Supplementary Figure 2. Wavenumber vs. % Reflectance for a specular reflectance spectrum of hydrous rhyolite Exp 2170 (6.2 wt.% H_2O). Quantification is done through identification of ΔR_{3500}, which extends from R_{max} to R_{min}, which are in the vicinity of 3100 and 3600 cm^{-1}. The value is then normalized to the % Reflectance at 4000 cm^{-1} (see Hervig et al., 2003 and King et al., 2004b for details).
